INTRODUCTION:-

PawBridge is an initiative dedicated to improving the welfare of street animals. PurrPose, the website, serves as the platform where users can easily report & connect with nearby animal shelters/NGO ; to contribute towards helping animals. PawBridge strives to be a bridge of care, ensuring no animal is left unheard or unattended. It aims to connect users with resources like veterinary clinics, adoption centers, and animal welfare organizations.
The project uses technology to foster compassion, raise awareness, and provide tangible solutions for animal welfare. Core features include reporting injured animals, locating nearby shelters/NGOs & also enabling adoptions. Empower users to take proactive steps in reporting and helping animals.

MOTIVATION:-

The increasing number of injured and abandoned animals on the streets. A need for a centralized resource to connect people with nearby vet clinics and adoption centers . Lack of accessible platforms to help animals in real-time. It desires to empower individuals to take action for animal welfare. Promoting adoption of street animals to give them loving homes. Raising awareness about the responsibility humans hold toward animals in need. Encouraging community involvement through fostering & Promoting adoption of street animals to give them loving homes.

PROBLEM STATEMENT:-

- People struggle to find nearby animal shelters/NGOs which often results into neglect of the injured animals, & when people want to adopt they are unable to find shelters which leads to buying of animals instead of adopting.
- Many injured animals on the streets go unnoticed and untreated due to a lack of reporting systems

PURPOSE, OBJECTIVES, & GOALS :-

- **Purpose**- To create a platform that bridges the gap between street animals in need and available resources. To ensure timely and effective help for injured or abused animals.

- **Objective**- Build a user-friendly website for reporting, locating, and contributing to animal welfare. Collaborate with organizations and government helplines for effective responses.
- **Goals**- Reduce the number of untreated street animals by providing accessible resources. Raise awareness and foster a culture of compassion and responsibility toward animals.

PROJECT SCOPE :-

- Real-time Reporting: Users can report injured animals by tagging their location, allowing rescuers to locate and assist them efficiently.
- Adoption Platform**:** The website will facilitate animal adoption by listing pets available at various shelters and rescue organizations.
- Organization Response System: Rescue organizations can respond to reports, updating whether the animal was rescued successfully.
- Centralized Database: Maintains a record of injured animal reports, adoption listings, and responses from rescue organizations.

PROJECT LIMITATIONS:-

- Dependency on Internet Connectivity: Real-time reporting and geolocation services require active internet access, which may not always be available in remote areas.
- No Automated Verification: User-submitted reports are not verified automatically, which may lead to false or duplicate entries.
- Response Delays: The availability of rescue teams and shelters may vary, leading to potential delays in attending to reports.
- The paper doesn't address how they verify if a dog is truly a street dog versus an owned dog
- While the system captures photos and GPS locations, there's no mention of a verification system to ensure the same dog isn't counted multiple times
